

## **El Salvador Disaster Response**

Tropical rains inundated Central America for 10 days in October, 2011, causing severe flooding, landslides, collapses of bridges and roads, and forcing more than 500,000 people from their homes. The small country of El Salvador suffered the greatest relative damage, with 34 lives lost and the majority of crops ruined just as they were about to be harvested.

Initial response funds enabled farmers to plant and harvest a good second crop of corn and beans. Now the levees, bridges, roads, churches and homes need to be rebuilt.

Our continued support through prayer, messages of solidarity and financial resources will allow the recovery to continue. All relief funds are faithfully being distributed through the ELCA Disaster Response office.
